Professional Summary

CS undergraduate who loves building things — from a terminal-based AI coding agent to full-stack trading platforms. Looking to build products and agents at a product company.

Technical Skills

- **Languages:** TypeScript, Python, C++
- **Frontend:** React, React Ink, Vite, NextJs
- **Backend:** Node.js, Hono, Express, FastAPI, REST APIs, WebSockets, Server-Sent Events
- **Databases / ORM:** SQLite, Drizzle ORM, MongoDB
- **Agent / AI Tooling:** Model Context Protocol (MCP), LLM streaming, tool-calling agent design
- **Tools:** Git, Bun, npm, Zod

Projects

BabyPanda — Autonomous AI Coding Agent github.com/ArmaanAmoli/BabyPanda

Built a TypeScript/Bun monorepo for an autonomous terminal-based coding assistant that uses streaming LLM responses to inspect repositories, modify files, execute shell commands, search the web, and maintain project-specific memory.

- Designed an event-driven agent orchestration loop that parses streamed model output into thoughts, answers, and MCP tool calls.
- Integrated the Model Context Protocol (MCP) over stdio to provide filesystem, shell, web search, webpage retrieval, notes, and memory-management tools.
- Implemented a Hono HTTP and WebSocket server with streaming endpoints for session creation, message handling, provider registration, and conversation history.
- Developed an interactive React Ink CLI with incremental terminal rendering, scrollable message history, live streamed responses, tool output, and reasoning display.
- Added SQLite persistence with Drizzle ORM for sessions, messages, API providers, tool-result classification, token usage, and compaction summaries.
- Implemented context-window management that summarizes older conversations and reloads recent messages to support long-running sessions.
- Added project-scoped memory under `~/.babypanda`, structured logging (agent/server/CLI/MCP/DB), Zod schema validation, and retry handling for transient LLM/API failures.

Technologies: TypeScript, Bun, React, Ink, Hono, SQLite, Drizzle ORM, Model Context Protocol, Axios, Zod, Server-Sent Events, Node.js streams.

Paper Trading App — Full-Stack Market Simulator github.com/ArmaanAmoli/Paper-Trading-App

Developed a full-stack paper-trading platform that simulates stock-market investing with live market data, technical analysis, trade execution, watchlists, and portfolio tracking.

- Built a Docker-containerized full-stack architecture with a React + Vite frontend, an Express API for auth and trade persistence, and a Python FastAPI service for real-time market data.
- Implemented JWT-based authentication and MongoDB-backed persistence for user accounts, trades, and portfolios.
- Built a Yahoo Finance data pipeline in FastAPI delivering live quotes and technical indicators (SMA, EMA, RSI, Bollinger Bands).
- Implemented buy/sell trade execution, stop-loss orders, and watchlists, with WebSocket-based live quote and indicator streaming to the frontend.

Technologies: React, Vite, Node.js, Express, Python, FastAPI, MongoDB, WebSockets, JWT, Docker.

Education

Lakshmi Narain College of Technology (RGPV) — Bhopal, Madhya Pradesh
B.Tech, Computer Science Artificial Intelligence and Data Science 2024–2028 · 5th Semester (Current) · CGPA: 8.55

St. Joseph Co-Ed School, Kolar Road (CBSE) — Bhopal, Madhya Pradesh
Class XII: 91.2% — 2023–2024
Class X: 91.1% — 2021–2022

Competitive Programming

LeetCode: leetcode.com/u/Tiku_Badmash — 400+ problems solved
Codeforces: codeforces.com/profile/ArmaanAmoli — 40+ problems solved
